Art Unit: 1725

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1, 3, 6, 7 are again rejected under 35 U.S.C. 103(a) as being unpatentable over either JP 6-320,245 or JP 6-304,727 for the same reasons as set forth in the previous office action.

4. Applicant's arguments filed Nov. 19, 2002 have been fully considered but they are not persuasive.

a. In page 3 of the remarks applicants stated that neither one of the cited prior art references shows that first and second thermoelements are arranged in first and second parallel rows for measuring temperatures. However, in page 2, paragraphs [0006], and [0007] as well as figures 2-4 of JP '727 the claimed arrangement. JP '245 also shows the same arrangements (see page 2,

Art Unit: 1725

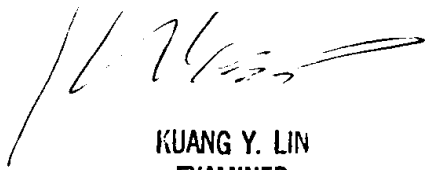

paragraphs [0005] and [0006] as well as figures 2-4 of the drawing). In those prior art arrangements, thermoelements 4a and 4b locate at different parallel rows at uniform vertical spacing to one another for measuring temperature difference ($T_a - T_b$). The heat flux q is calculated from the measured temperature difference.

b. In page 4 of the remarks applicants stated that US patent '604, mentioned in the first office action, shows that in figures 5 and 7-9 the temperature sensors 14 and 15 are arranged in a single row. However, it is noted that the inventors and the assignee of the patent are different from that of both JP '727 and 245. Thus, applicants can not guess or even suggest that the arrangements of JP 727 and '245 are the same as that of US patent '604.
